

GUARANTEED ANALYSIS

Total Nitrogen (N)	: 6 % (w/v)
Nitrate Nitrogen (NO ₃ -N)	: 6 % (w/v)
Water Soluble Magnesium Oxide (MgO)	: 9 % (w/v)
Free Amino Acid	: 3 % (w/v)

CE-FORCE

Liquid Magnesium Nitrate Fertiliser

MAG

Liquid Macro
Nutrient Fertilisers

FEATURES

CE-FORCE MAG is a liquid fertiliser that includes completely water soluble nitrogen and magnesium. Nitrogen promotes leaf and body formation in plants. Important physiological functions within the body of the plant affect the product amount and product quality. It is the main material of the plants and the main building stone of chlorophyll, that transforms solar energy to useful energy, which is beneficial to the plant. During the green developmental period, the plant uses too much nitrogen.

BENEFITS

Magnesium is present within the structure of chlorophyll and therefore it is very important for photosynthesis in plants. As a result of its deficiency, plant development and fruit formation weakens and fruit fugacity increases. With magnesium, sugar levels, fat and amyllum formation occurs on the plants.

CE-FORCE MAG is the building stone of chlorophyll and it plays an important role in the plant retainin its green colour. Healthy chlorophyll enables plant photosynthesis which results in healthier plants. The plant will also have a more productive mechanism.

Also CE-FORCE MAG is effective on blossom formation and set because of its content. Magnesium facilitates potassium intake. This shows that CE-FORCE MAG should be used at the fruit set and formation periods of the plant as a supportive product. It ensures that the fruit buds for the following year develop better and healthier fruit trees.

CE-FORCE MAG is used for the removal of any magnesium deficiency in crops. It is a special product that can be used on all kinds of crops.

CE-FORCE MAG - during the sprigging application and vegetative growth, the product should be applied and repeated at 15 - 20 day intervals.

CE-FORCE MAG is used in preventing premature ageing of the plants.

CE-FORCE MAG is used to speed up the formation of chlorophyll in plants. Darker green and large surface areas are formed on the leaves.

CE-FORCE MAG improves the nutritional status of plants and improves the efficiency and quality.

CE-FORCE MAG can be applied via foliar application and safely to the soil.

CE-FORCE MAG can be safely used in mixtures with phytosanitary products, fertilisers and plant growth regulators.

USAGE AREA, FORM, TIME AND QUANTITY

USAGE AREA	APPLICATION TIME	SOIL APPLICATION	FOLIAR APPLICATION
All Greenhouse and All Open Field Winter Vegetables	From planting to harvesting 3 - 4 applications.	10 - 15 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Strawberry and Vineyard	From the period of vegetative development to harvesting 3 - 4 applications.	10 - 15 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Ornamental Plants	It is applied throughout the season with 21-day intervals after flowering.	10 - 15 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Corn and Sunflower	15 - 20 days after sowing 2 - 3 application with 10 days intervals.	20 - 25 Lt. / Ha	300 - 350 cc. / 100 Lt. Water
Banana	2 - 3 applications from 30 - 45 days prior to blooming (April-May).	10 - 15 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
All Stone and Pome Fruit Trees and Nut Crops	At the beginning of blooming 1 application by drip irrigation.	10 - 15 Lt. / Ha	150 - 200 cc. / 100 Lt. Water
Cotton	1 - 2 applications with 15 - 20 day intervals starting from 10 - 15 leaf stage.	20 - 25 Lt. / Ha	350 - 400 cc. / 100 Lt. Water

MIXABILITY

It is recommended to conduct small container compatibility tests before mixing with the other products. To be used only if required, and do not exceed the recommended dosages.
