

FERROKING

EDDHA-chelated iron fertiliser

CEON Professional Product Presentation

Product positioning

A high-purity EDDHA-chelated iron fertiliser with a high ortho-ortho fraction for persistent iron availability, particularly in calcareous and alkaline soils where iron chlorosis is common.

Form	Dark red to black water-soluble microgranule/powder
Packaging	1 kg, 5 kg, 10 kg
Catalogue source	Page 57

Guaranteed analysis

Declared component	Guaranteed content
Water-soluble iron (Fe)	6% w/w
Iron chelated as EDDHA, ortho-ortho fraction	4.5% w/w

Why this product?

- Rapid and durable correction of iron chlorosis
- High ortho-ortho content supports stability at elevated soil pH
- Promotes chlorophyll formation and restoration of green leaf colour
- Suitable for soil application, fertigation and hydroponic stock solutions
- Highly soluble and easy to dose when handled correctly

How to use it

Route / crop group	Practical programme guidance
Young vegetables	10-15 kg/ha/season
Young fruit trees	6-16 kg/ha/season
Adult fruit trees	15-40 kg/ha/season
Citrus, vines and flowers	6-50 kg/ha/season depending on crop age and chlorosis severity

Mixing, compatibility and stewardship

Best applied to moist soil in the active root zone. Protect the product and prepared solutions from intense light where practical. Do not combine concentrated iron chelate with incompatible oxidising products.

- Confirm water quality and system compatibility.
- Carry out a jar test before tank mixing.
- Use the exact grade and dose justified by crop stage and analysis.
- Follow the approved local label and observe all PPE requirements.

Quality and commercial readiness

- Batch-specific COA required before commercial release
- Final market SDS and label classification required
- Traceable batch, manufacturing and expiry coding
- Packaging integrity and net-content verification
- Destination-country registration and claim review
