GUARANTEED ANALYSIS

Total Organic Matter	: 20 % (w/v)
Organic Carbon (C)	: 8 % (w/v)
Total Nitrogen (N)	: 1,5 % (w/v)
Water Soluble Potassium Oxide (K ₂ O)	: 3,5 % (w/v)
Total Humic and Fulvic Acid	: 20 % (w/v)
Humic Acid	: 5 % (w/v)
Fulvic Acid	: 15 % (w/v)

BENEFITS

CE-FORCE OURLEX regulates the soil degeneration resulting from overuse of chemicals. It is a unique organic fertiliser which can restore the vitality and nutritional functionality of the soil in a short period of time. The level of organic materials it contains ensures higher fertility in soil, while its varied nutritional content helps balanced and regular nutrition of the plants. It increases the organic material levels in the soil which are vital for survival of benign microorganisms living in the soil. Its soil regulation effect disintegrates previously applied chemical fertilisers and converts them into a form easily absorbable by the plants.

CE-FORCE OURLEX removes salinity and chemical residues by enzyme and microorganism activity. It helps to build a more developed and restored root structure, better root pressure and rejuvenated trees.

CE-FORCE OURLEX water retention capacity is up to 3 times its weight. Since it helps speed root development, it can be used as a root fertiliser. It can also be used as bottom layer fertiliser with other soil regulators. When used as top layer fertiliser it yields excellent results. Since it contains all nutrients required for any type of plants or trees, it does not need to be supplemented by other fertilisers. Its microorganism content prevents root diseases and helps strengthen the root development. It converts all nutrients in the soil into a form easily absorbable by the plants. It provides zinc, copper, iron, manganese, magnesium, nitrogen, phosphor and potassium elements required by the plants. Its high humic and fulvic acid content helps increase flower and fruit formation. It provides increased yield and noticeable difference in fruit flavor.

CE-FORCE OURLEX is a special product manufactured from wet plants. Through long practice and trials this product is now available on the market.

CE-FORCE OURLEX reacts with the growth and development of applied products in a very short time. It can be used safely in plants during every period.

CE-FORCE OURLEX responds to the needs of the plant due to its special content.

CE-FORCE OURLEX directly and indirectly increases the formation of fringe roots in plants. This allows the increase of fringe root surface with the soil.

CE-FORCE OURLEX improves the chemical and physical structure of the soil due to its special formulation.

CE-FORCE OURLEX improves the biological structure by increasing microbial activity in the soil. It improves the physical structure of the soil by increasing the cation exchange and water retention capacity. It enables the main nutrients and micro elements found in soil (unavailable) to be released and used by plants. Thanks to its special content, it responds to the needs of plants during every period.

USAGE AREA, FORM, TIME AND QUANTITY

USAGE AREA	APPLICATION TIME	SOIL APPLICATION	FOLIAR APPLICATION
All Greenhouses and All Open Field and Winter Vegetables	1 - 2 applications with drip irrigation 10 days after planting. From pre-flowering until the harvest, it can be applied with foliar application at regular intervals.	15 - 20 Lt. / Ha	150 - 200 cc. / 100 Lt. Water
Strawberry and Ornamental Plants	Begins with vegetative growth and apply at 10 - 15 day intervals throughout the season.	15 - 20 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Vineyard	From the beginning of the shoot until the harvesting period, it can be applied by drip irrigation when needed. It can also be applied by foliar application at regular intervals until fruit set period.	15 - 20 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Corn and Sunflower	Every 7 - 10 days from bud break to bloom. Use while Nitrogen fertilization is necessary.	15 - 20 Lt. / Ha	200 - 250 cc. / 100 Lt. Water
Cereals and Forage Crops	During the tillering period in early spring.	15 - 20 Lt. / Ha	250 - 300 cc. / 100 Lt. Water
All Stone and Pome Fruit Trees and Nut Crops	From beginning of blooming until the harvesting, it can be applied at regular intervals.	15 - 20 Lt. / Ha	100 - 150 cc. / 100 Lt. Water
Cotton	It can be used safely in every period needed from when 8 - 10 leaves appear.	15 - 20 Lt. / Ha	350 - 400 cc. / 100 Lt. Water

MIXABILITY

It is recommended to conduct small container compatibility tests before mixing with the other products. To be used only if required, and do not exceed the recommended dosages.

FEATURES

All of the materials used in the content of CE-FORCE OURLEX are from vegetal origins. Physical methods are used in all production stages, and no chemical methods are employed during its production.

CE-FORCE OURLEX contains all elements needed by the plant and the soil, including trace elements required by the plant.

When used, CE-FORCE OURLEX increases the effectiveness of all supplemental products and other fertilisers applied beginning from the planting of the seed or sapling.
