GUARANTEED ANALYSIS

Total Nitrogen (N)	: 7,5 % (w/v)
Phosphorus Penta Oxide (P2O5)	: 11 % (w/v)
Sulphur (S)	: 1,5 % (w/v)
Copper (Cu)	: 2 % (w/v)
Manganese (Mn)	: 1 % (w/v)
Molybdenum (Mo)	: 0,35 % (w/v)
Zinc (Zn)	: 1,8 % (w/v)

BENEFITS

MICRO-COTE 24 is a micronutrient suspension for Seed Treatment with Nitrogen, Copper, Manganese, Molybdenum and Zinc.

The composition of MICRO-COTE 24 meets the specific requirements of Cereals, especially for crops with higher Zinc requirement (Rice and Corn) or when growing on soils with low Zinc availability.

MICRO-COTE 24 helps to create an even distribution on the surface and affixes extraordinary well to the seeds. As a result, abrasion resistance will be improved. It can be used in combination with other Seed Treatments like fungicides and insecticides.

BENEFITS

- Excellent crop safety.
- Particularly indicated for cereals with higher Zn need (Rice and Corn).
- Improved covering and adhesion of nutrients on the seed.
- Even distribution on the seed surface.
- Fully chelated cationic micronutrients - no binding to the soil.
- Supports germination and more uniform seedling development.
- Promotes early plant growth under stress conditions.
- Improved seedling vitality and health.
- May improve the benefit of certain pesticide seed treatment products.

Special Nutrient Seed Treatment

MICRO-COTE 24

FIELDS OF APPLICATION AND RATES OF USE

MICRO-COTE 24 is an easy to use formulation which can be applied readily through almost all equipment designed to apply liquid, flowable or slurry seed treatment products to the seed.

MICRO-COTE 24 can be applied undiluted directly onto the seed via application machinery suitable to provide thorough and accurate coating to the seed. Dilution with clean water (e.g. 100 ml. up to 150 ml of water / 100 Kg. of seeds) may be required with some types of application equipment. Diluted product should be agitated before and during application. Do not allow diluted product to stand for long periods, e.g. overnight, without agitating thoroughly before continuing application.

MICRO-COTE 24 can be mixed with fluid fungicide applications. Follow instructions of the pesticides manufacturers as indicated on their label.

If powder fungicides are to be used, apply MICRO-COTE 24 first. Let seeds dry before applying powders.

DOSAGES :

RICE:

Dry seed: 150 - 200 ml per 100 Kg. of seeds
 Pregerminated seed: Dipping in a MICRO-COTE 24 solution at 4 cc. / Lt. for 2 - 3 minutes
 Do not exceed dipping time above 5 minutes, as this might reduce seed germination.

CORN/MAIZE:

400 - 500 ml. per 100 Kg. of seeds (80.000 - max. 100.000 seeds / Ha).

WHEAT, BARLEY, TRITICALE:

150 - 200 ml. per 100 Kg. of seeds

ALL OTHER CROPS:

200 ml. per 100 Kg. of seeds.

MIXABILITY :

It is recommended to conduct small container compatibility tests before mixing with the other products.
 To be used only if required and do not exceed the recommended dosages.

FEATURES

- Special nutrient Seed Treatment for Rice and Corn (Maize)
- Micronutrient Fertiliser Suspension concentrate for Seed Treatment of Rice and Corn (Maize)
- Premium Seed Treatment
- All nutrients fully available to the plant
- Fully Chelated Micronutrients Description
