

NEW ERA !

IN FERTILIZATION

A Brand New and Unique Technology

NUTRITAB

TABLET FERTILIZER

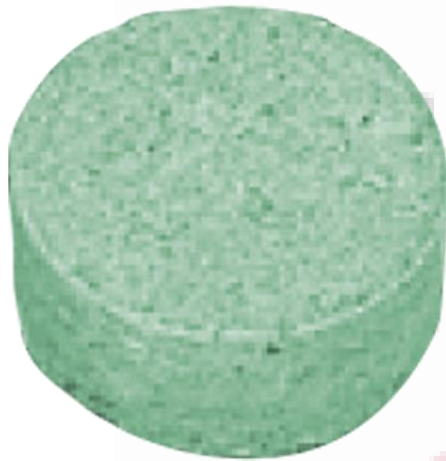

WHAT IS THE TABLET FERTILIZER ?

- It is a compressed slow release fertilizer containing 20 10 10 NPK fertilizer and 7.5% SO₃.
- N contains DMPP inhibitor. Phosphorus and Potassium are chelated.
- NUTRITAB[®] is a slightly soluble alkaline Potassium-Magnesium Phosphate content that has a positive effect on the pH of acidic soils while guaranteeing the slow movement of other essential nutrients (Phosphorus, Potassium and Magnesium).

WHY SHOULD WE USE THE TABLET ?

- Tablet fertilizer has a feature that can provide the plant nutrients needed by the plant as much and on time with its slow release.
- Since it is a product containing advanced technology, it does not disturb the structure of the soil and keeps the pH value as it should be.

IS IT POSSIBLE NOT TO FERTILIZE FOR 6 MONTHS?

The release of nutrients from NUTRITAB[®] to the soil continues **from 6 to 12 months**, depending on local climatic conditions!

Tablet NUTRITAB[®] fertilizers, when applied correctly, allow point application which guarantees a significantly better use of the nutrients provided compared to other commonly applied complex fertilizers.

Fertilization Is Much Easier Now!

- One of its most important features is the use effect, which is beneficial for fertilizing plants with a longer growing period (perennials) in inaccessible places or where conventional fertilization methods cannot be used.
- Fertilizer tablets are ideal for fertilizing each plant individually.

WEIGHT IS FIX !

THE RISK OF OVER FERTILIZATION IS REMOVED

- Provides balanced plant growth. Controlled release of all nutrients in it is provided. Thanks to the controlled release technology, you do not have to fertilize repeatedly.
- It contains **absolutely no chlorine and sodium!**
- it provides a balanced and timely feeding, your plants will have stronger and more developed roots and a healthy appearance.
- NUTRITAB[®] is also environmentally friendly.

Where Are The Usage Areas?

- **NUTRITAB**® Tablets are designed for use around potted and field-grown trees, shrubs, newly planted plants, lawns and other soil-grown crops.
- **NUTRITAB**® Tablets can be successfully applied to newly established cultures (EXAMPLE 1-4 year old forest trees) and seedlings in nurseries or soil in pots.

How Does Fertilization Cost Decrease?

What matters is the economic impact of wood growth, thanks to better seedling growth, shorter flowering cycles and slow release Tablet Fertilizer.

The use of NUTRITAB[®] significantly saves time, material and labor and eliminates the need for additional fertilization.

The high cost per tree of compound fertilizer is reduced by half with the use of tablet fertilizers.

THANK YOU !
